Öffne die **Einstellungen**

Tippe/Klicke auf **Barrierefreiheit**

The image shows a Windows Settings window titled 'Einstellungen'. On the left, the user profile 'Tech Bone' is visible with the email 'techbone2020@gmail.com'. Below the profile is a search bar labeled 'Einstellung suchen'. A list of settings categories is shown, with 'Barrierefreiheit' selected and highlighted. The main content area is titled 'Barrierefreiheit' and contains several settings cards: 'Mauszeigerfarbe, -größe', 'Textcursor', 'Bildschirmlupe', 'Farbfilter', 'Kontrast-Designs', and 'Sprachausgabe'. A hand icon with a red circle around the index finger is pointing to the 'Sprachausgabe' card. Below this card, the 'Hörvermögen' section is partially visible. At the bottom of the window, the 'Audio' settings card is also partially visible.

Tippe/Klicke auf **Sprachausgabe**

Lege die **Geschwindigkeit** oder **Tonhöhe** fest

The screenshot shows the Windows Settings application. The left sidebar lists various settings categories, with 'Barrierefreiheit' (Accessibility) selected. The main content area is titled 'Sprache' (Language) and shows the current language as 'Microsoft Stefan - German (Germany)'. Below this, there are several settings cards: 'Stimmen hinzufügen' (Add voices), 'Geschwindigkeit' (Speed), 'Tonhöhe' (Pitch), 'Lautstärke' (Volume), and a toggle for 'Lautstärke anderer Apps verringern, wenn die Sprachausgabe aktiv ist' (Reduce volume of other apps when speech is active). The 'Geschwindigkeit' card is highlighted with a red hand icon and arrows, indicating it is the focus of the video. The 'Tonhöhe' card is also highlighted with a red hand icon and arrows. The 'Lautstärke' card has a volume slider set to 10. The 'Lautstärke anderer Apps...' toggle is turned on.

Fertig!
